#### APR - 35217/II—D

## Earth, Atmospheric, Ocean and Planetary Science Paper II

Time Allowed: 75 Minutes]

[Maximum Marks: 100

**Note:** This paper contains **Fifty (50)** multiple choice questions. Each question carries **Two (2)** marks. Attempt *All* questions.

- 1. Which of the following is *correct* statements of speed of seismic waves?
  - (A)  $V_R > V_L > V_S > V_P$
  - (B)  $V_S > V_P > V_L > V_R$
  - (C)  $V_P > V_S > V_L > V_R$
  - (D)  $V_L > V_R > V_P > V_S$
- 2. Which of the following is the largest  ${\rm H_2O}$  reservoir on the earth ?
  - (A) The oceans
  - (B) Streams and lakes
  - (C) Glaciers/ice
  - (D) The water vapour in the atmosphere

- - (A) S-waves
  - (B) Rayleigh waves
  - (C) Waves of oscillation
  - (D) Waves of translation
- 4. The part of the shoreline between high and low tides sometimes refers to as:
  - (A) Littoral zone
  - (B) Sublittoral zone
  - (C) Bathyal zone
  - (D) Abyssal zone

- 5. An ocean water wave is energy, that is the direct result of the transfer of energy, from which source ?
  - (A) Gravity
  - (B) River water entering the oceans
  - (C) Wind
  - (D) Earth's rotation
- 6. The primary factor that actually determines the stream water to flow in a laminar or turbulent is:
  - (A) Stream depth
  - (B) Water temperature
  - (C) Stream width
  - (D) Stream velocity
- 7. Which of the following materials has the lowest porosity?
  - (A) Shale
  - (B) Gravel
  - (C) Granite
  - (D) Sandstone

- 8. Magnetic field of the earth is generated in the:
  - (A) Outer core
  - (B) Inner core
  - (C) Sun
  - (D) Crust
- 9. Which of the following is *not* proof of sea floor spreading?
  - (A) Parallel magnetic reversal zones on ocean floor
  - (B) Systematic younging of ocean floor from coast towards MOR
  - (C) Transform of faults and active volcanism
  - (D) Continental coastal outlines of major oceans
- 10. The mid-Atlantic ridge is exposed above sea level at :
  - (A) Geneva
  - (B) Iceland
  - (C) Bornea
  - (D) Cuba

- 11. If 'n' is the planet number starting from sun as '0', the Titius-Bode's law states that the distances in Astronomical units from the sun occur as equal to:
  - (A)  $5n + 3n^2 + 2n^3$
  - (B)  $2^{n-2} \times 3\pi$
  - (C)  $0.4 + 0.6 \times n^2$  where  $n \ge 1$
  - (D)  $0.4 + 0.3 \times 2^{n-2}$  where  $n \ge 2$
- 12. The P-wave making a complete traverse from crust-mantle-core and back to crust is denoted as:
  - (A) PKIKP
  - (B) PKICIKP
  - (C) PCMCP
  - (D) CMCMC
- 13. That the stars and galaxies are moving away, and their speeds can be obtained by the Doppler effect is the characteristic of:
  - (A) Blue shift
  - (B) Red shift
  - (C) Yellow shift
  - (D) Violet shift

- 14. The pressure at the bottom of the continental crust of an average thickness of 36 km is:
  - (A) 9.54 kbar
  - (B) 15 kbar
  - (C) 5.94 kbar
  - (D) 20 kbar
- 15. Depth at which seawater reaches equilibrium with aragonite or calcite is called .......
  - (A) Isocline depth
  - (B) Lysocline depth
  - (C) Isostatic depth
  - (D) Isoseismal depth
- 16. Which type of water exists as continuous film around the soil particles?
  - (A) Hydromorphic
  - (B) Hygroscopic
  - (C) Capillary
  - (D) Gravitational

17.	Chrome rich green garnet is:	20.	Which of the following statements			
	(A) Uvarovite		is not true?			
	(B) Pyrope		(A) In strike slip fault, sense of movement is parallel to strike			
	(C) Grossularite		of the fault plane			
	(D) Andradite	(B) Transform fault are not strike				
18.	The most stable form of manganese		slip faults			
	mineral in the complete range of pH		(C) Dextral and sinistral are types			
	of secondary environment is:		of slips along a strike slip fault			
	(A) $Mn(OH)_2$		(D) San-Andreas fault of California			
	(B) MnOOH		is a strike slip fault			
	(C) $MnO_2$	21.	Which of the following objects on			
	(D) $Mn_3O_4$		deformation can be best suited to analyse strain. Select appropriate			
19.	The most common sediment covering		answer:			
	the deep ocean floor is		(A) Pebbles from deformed			
	(A) Sand		conglomerate			
	(B) Gravel		(B) Fossil molluscs			
	(C) Calcareous ooze		(C) Feldspar phonocrysts			
	(D) Siliceous poze		(D) All of the above			

- 22. In karst topography a compound doline or a chain of intersecting dolines are known as:
  - (A) Blind Valley
  - (B) Cavern
  - (C) Cock-pit
  - (D) Uvala
- 23. One of the following causes mobile beaches to change their orientation so that the plan view of the shoreline closely confirms with the shape of wavefront:
  - (A) Reflection
  - (B) Deflection
  - (C) Refraction
  - (D) Inclination
- - (A) Fungicides
  - (B) Pesticides
  - (C) Antacides
  - (D) Germicides

- 25. Most deep-ocean trenches are located in the :
  - (A) Pacific ocean
  - (B) Indian ocean
  - (C) Atlantic ocean
  - (D) Gulf of Mexico
- 26. The movement of water parallel to the shore within the surf zone is termed:
  - (A) Longshore current
  - (B) Rip current
  - (C) Beach drift
  - (D) Tidal current
- 27. Sand dunes on coasts commonly are:
  - (A) Star and Barchan Dunes
  - (B) Parabolic and Blowout Dunes
  - (C) Linear and Star Dunes
  - (D) Barchan and Dome Dunes

- 28. One of the following is the most common process of erosion :
  - (A) Abrasion
  - (B) Attrition
  - (C) Quarrying
  - (D) Plucking
- 29. Lahar is a type of:
  - (A) Solifluction
  - (B) Gelifluction
  - (C) Debris flow
  - (D) Soil creep
- 30. An intense rotating column of air that protrudes from a cumulo-nimbus cloud in the shape of funnel whose circulation is on the earth surface:
  - (A) Thunderstorm
  - (B) Typhoon
  - (C) Tornadoes
  - (D) Cyclone

- 31. The accumulation of daily and seasonal weather events over a long period of time scale :
  - (A) Diurnal weather
  - (B) Climate
  - (C) Weather
  - (D) Season
- 32. An extensive ocean warming that begins along the coast of Peru and Equator:
  - (A) La-Nina
  - (B) Sea surface temperature
  - (C) Ocean nino index
  - (D) El-Nino
- 33. Which of the following statements is *true* ?
  - (A) Dry air is denser than moist air
  - (B) Moist air is denser than dry air
  - (C) Dry air temperature is always more than moist air temperature
  - (D) Relative humidity of moist air is always higher than dry air

- 34. Cirrus clouds occur in the height range of :
  - (A) 1-2 km
  - (B) 2-5 km
  - (C) 12-18 km
  - (D) 6-12 km
- 35. Among the four atmospheric constituents  $N_2$ ,  $O_2$ , Ar and  $O_3$ , ...... has least fractional concentration.
  - $(A) O_2$
  - $(B) O_3$
  - (C)  $N_2$
  - (D) Ar
- 36. The spectral region of the electromagnetic radiation which passes through the atmosphere without much attenuation is known as:
  - (A) Ozone hole
  - (B) Atmospheric window
  - (C) Ozone window
  - (D) Black hole

- 37. Occurrence of sargur group indicates the antiquity of :
  - (A) East Dharwar Craton
  - (B) West Dharwar Craton
  - (C) Singhbhum Craton
  - (D) Bastar Craton
- 38. The Eastern Ghat Mobile belts are defined as:
  - (A) Early Proterozoic
  - (B) Middle Proterozoic
  - (C) Archean
  - (D) Mesozoic
- 39. The correct chronological order (older to younger) of the following geological units is:
  - (1) Talchir tillite
  - (2) Muth quartzite
  - (3) Umia ammonite bed
  - (4) Mahadeva
  - (A) 2, 1, 4, 3
  - (B) 1, 2, 3, 4
  - (C) 2, 3, 1, 4
  - (D) 4, 3, 2, 1

- 40. The limestone-shale succession above the Panjal traps is described as:
  - (A) Syringothyris limestone
  - (B) Zewan beds
  - (C) Muschelkalk beds
  - (D) None of the above
- 41. Age of the oldest pelagic sediments on the present sea floor is:
  - (A) Late Jurassic
  - (B) Early Pleistocene
  - (C) Ordovician
  - (D) Permian
- 42. The 90° East ridge in the Indian ocean is an example of :
  - (A) Failed rift
  - (B) Ocean plate folding
  - (C) Aseismic ridge
  - (D) Plate buckle

- 43. The major unconformity during

  Cambro-Ordovician sequences in

  the Himalaya is supposed to be the

  effect of:
  - (A) Closure of Tethys
  - (B) Pan African Orogeny
  - (C) Global sea level fall
  - (D) Global cooling
- 44. Photochemistry of the upper atmosphere occurs because of ...... of the  ${\rm O}_2,\,{\rm N}_2$  and  ${\rm O}_3$  that is present.
  - (A) Photolysis
  - (B) Hydrolysis
  - (C) Hydration
  - (D) Solarysis

- 45. Flood magnitude can be measured as the elevation to which a river rises during a flood, but more commonly it is reported as the maximum ....................... of the stream during the event.
  - (A) Surcharge
  - (B) Surge
  - (C) Discharge
  - (D) Recharge
- 46. Inclinations of the earth's magnetic field varies as a function of:
  - (A) Lattitudes
  - (B) Longitudes
  - (C) Altitudes
  - (D) Time
- 47. The inner core comprises of:
  - (A) Solid Fe and Mg
  - (B) Liquid Fe and Ni
  - (C) Solid Fe and Ni
  - (D) Solid Fe, Liquid Ni and S

- - (A) 10,000 to 1,00,000
  - (B) 100 to 400
  - (C) 400 to 800
  - (D) 800 to 1600
- 49. Island arcs are developed at the:
  - (A) Destructive plate margins
  - (B) Constructive plate margins
  - (C) Conservative plate margins
  - (D) Continental rifts
- 50. Spinel transformation to Mgperovskite with the iron going into a Mg-Wustite structure takes place at the ............................. depth boundary of the lower mantle.
  - (A) 650 km
  - (B) 400 km
  - (C) 530 km
  - (D) 250 km
