JUN - 30220		(To be	∟ fille	d by	the	l Cand	l lidat	 ;e)
Time Allowed : 2 Hours]				•				: 200
Number of Pages in this Booklet : 4	18	Number of Que	_					
 Instructions for the Candidates 1. Write your Seat No. and OMR Sheet No. in the on the top of this page. 2. This paper consists of 190 objective type questions will carry two marks. Candidates should attempe either from sections I & II or from sections I & 3. At the commencement of examination, the question is equested to open the booklet and compulsorily follows: (i) To have access to the Question Bookled paper seal on the edge of this cover page a booklet without sticker-seal or open (ii) Tally the number of pages and number the booklet should be obtained from the investigation of questions repeated or not in serial other discrepancy should not be accept booklet should be obtained from the investigation. The same may please be noted. (iii) After this verification is over, the OMR should be entered on this Test Booklet. 4. Each question has four alternative responses. (A) B (B) D 	s. Each questions of <i>all</i> questions <i>i</i> III only. testion booklet nutes, you are <i>y</i> examine it as et, tear off the <i>b</i> . Mathematical Science Paper II _ 100 35 ____

Paper IITime Allowed : 120 Minutes][Maximum Marks : 200Note : This Paper contains One Hundred Ninety (190) multiple choice questions in THREE (3) sections, each question carrying TWO (2) marks. Attempt all questions either from Sections I & II only or from Sections I & III only. The OMR sheets with questions attempted from both the Sections viz. II & III, will not be assessed. Number of questions, sectionwise : Section I : Q. Nos. 1 to 10, Section II : Q. Nos. 101 to 190.				
1.	SECTION I If $\mathrm{T}:\mathbf{R}^n \to \mathbf{R}^m$ is a linear map, then	3. Suppose X is a continuous random		
	it is represented by a matrix of order :	variable having the following		
	(A) $m \times n$	probability density function :		
	(B) $m \times m$ (C) $n \times n$	$f(x) = C(4x - 2x^2), 0 < x < 2$		
	(D) $n \times m$	= 0, otherwise		
2.	Let V be a finite dimensional vector space over \mathbf{R} and $T \in L(V)$. If λ is an eigenvalue of T, then which of	What is the value of P[X > 1] ? (A) $\frac{2}{3}$		
	the following statements is <i>false</i> ? (A) $ker(T - \lambda I) \neq \{0\}$	(B) $\frac{C}{2}$		
	(B) $ker(T - \lambda I) = \{0\}$ (C) $rank(T - \lambda I) < dim V$ (D) $det(T - \lambda I) = 0$	(C) $\frac{1}{2}$ (D) $\frac{1}{4}$		

3

4. The moment generating function of a random variable X is given by $Mx(t) = \exp[2e^t - 2]$. Then E[X] =

- (A) 0
- (B) 1
- (C) 2
- $(D) \ \infty$
- 5. Consider the LP problem :

Max Z = $10x_1 + 6x_2$

Subject to the constraints :

 $5x_1 + 3x_2 \le 30;$ $x_1 + 2x_2 \le 18$ and $x_1, x_2 \ge 0.$

Then the LP has :

- (A) No feasible solution
- (B) Multi-feasible solutions
- (C) Unique feasible solution
- (D) Cannot say anything about solution

- 6. Which of the following statement/s is/are *true* for an LP problem ?
 - Every feasible solution is a basic feasible solution.
 - (II) If there is a feasible solution, then there is a basic feasible solution.
 - (A) only (I) is true
 - (B) only (II) is true
 - (C) both are true
 - (D) neither (I) nor (II) is true
- 7. Let (X_n) be a sequence of real numbers and $x \in \mathbf{R}$. Then which of the following is *true* ?
 - (A) If $\lim_{n \to \infty} x_n \leq x$, then $x_n \leq x$ for all n
 - (B) If $\lim_{n\to\infty} x_n \neq x$, then there exist *m* and *n* such that

 $x_m < x < x_n$

- (C) If $\lim_{n\to\infty} x_n$ does not exist, then (x_n) has no subsequence converging to x
- (D) If $\lim_{n \to \infty} x_n < x$, then $x_n < x$ for infinitely many numbers n

SECTION II

- Define a function $f: [0, 1] \rightarrow \mathbf{R}$ as 8. $f(x) = x^2 + e^x - 2$. Then : (A) f(x) = 0 has no solution in [0, 1](B) f'(x) = 0 has a solution in [0, 1](C) f is increasing (D) f is not one-one Let z, w be two complex numbers 9. such that $z w \in \mathbf{R}$ and $z + w \in \mathbf{R}$. Then : (A) z = w(B) $z = \overline{w}$ (C) $z, w \in \mathbf{R}$ (D) $z = \overline{w}$ or $z, w \in \mathbf{R}$ 10. Define $f: \mathbf{C} - \{0\} \to \mathbf{C}$ by $f(z) = \frac{1}{z}$. Then the power series expansion of f(z) about z = 1 in the disc $\{z : |z - 1| < 1\}$ is : (A) $1 - (z - 1) + (z - 1)^2 - (z - 1)^3$ + (B) $1 + (z - 1) + (z - 1)^2 + (z - 1)^3$ + (C) $1 - z + z^2 - z^3 + \dots$ (D) $1 + z + z^2 + z^3 + \dots$
- 11. Let $f : D \rightarrow \mathbf{R}$ be defined as f(x, y, z) = xyz; where D = { $(x, y, z) \in$ $\mathbf{R}^{3}/x^{2} + y^{2} + z^{2} < 1$ }. Let P denote the plane $\{(x, y, z)/2x + 3y + 5z = 0\}$. Then $\int f \, dx \, dy \, dz$ is : $\mathbf{D} \cap \mathbf{P}$ (A) Undefined (B) 0 (C) π (D) 2π 12. Let $A = \begin{pmatrix} 1 & 2 \\ 3 & 6 \\ 1 & 2 \end{pmatrix}$ and $f : \mathbf{R}^2 \to \mathbf{R}^3$ be defined as f(x) = Ax. Then which of the following statements is false ? (A) f is continuous function (B) f is differentiable function (C) f maps open neighbourhood of
 - origin to an open neighbourhood
 - (D) the directional derivative of f in

direction of (1, 0) is $\begin{pmatrix} 1 \\ 3 \\ 1 \end{pmatrix}$

[P.T.O.

- 13. The vector normal to the gradient of the function $f : \mathbf{R}^3 \to \mathbf{R}$ defined by
 - $f(x, y, z) = xy + y^{2} + z$ at the point P = (1, -1, 1) is : (A) (-3, -3, 0)
 - (B) (3, 0, 3)
 - $(C) \ (-3, \ 0, \ 3)$
 - (D) (1, 0, 0)
- 14. Let f be a non-constant analytic function on the unit disc. Then which of the following is impossible ?
 - (A) $f(G) \subseteq \{z : \operatorname{Re}(z) \ge 1\}$
 - (B) $f(G) = \{z : |z| < 2\}$
 - (C) $f(G) = \{z : |z| > 1\}$
 - (D) $f(G) = \{z : |z| = 1\}$
- 15. Let $a, b \in \mathbb{C}$ and D be a disc in \mathbb{C} and $f(z) = ae^{z} + be^{-z}$ for all $z \in \mathbb{C}$. If f(z) = 0 for all $z \in D$, then : (A) a = 0 and b = 0
 - (B) a = 0 and b = 1
 - (C) a = 1 and b = 0
 - (D) a = 1 and b = 1
- 16. Let $f : \mathbf{C} \to \mathbf{C}$ be a non-constant analytic such that |f'(z)| < f(z)| for all $z \in \mathbf{C}$. Then :

(A)
$$\frac{1}{f}$$
 is not analytic

- (B) f is a polynomial
- (C) f'(z) = 0 for some z
- (D) f'' = cf' for some constant c

- 17. Let R[X] be the polynomial ring in one indeterminate over the field of real numbers. Then in the quotient ring R[X]/<X⁸ + 1> number of maximal ideals is :
 - (A) 1
 - (B) 2
 - (C) 3
 - (D) 4
- 18. Let *p* be an odd prime number and $\mathbf{Z}\left[\sqrt{-p}\right] = \{a + b\sqrt{-p}\} | a, b \in \mathbf{Z}\}$
 - (\subseteq C). Then the ring $\mathbf{Z}\left[\sqrt{-p}\right]$ is :
 - (A) not a Euclidean domain, but is a PID (Principal ideal domain)
 - (B) Not a PID, but is an UFD
 - (C) Neither Euclidean domain, nor a PID, but is an UFD
 - (D) not an UFD
- 19. Let Ω ⊆ C be a region and H(Ω) be the set of all analytic functions on Ω, then :
 - (A) H(Ω) is an integral domain which does not satisfy ascending chain condition on ideals

 - (C) $H(\Omega)$ is a finite dimensional vector space over C
 - (D) H(Ω) has only finitely many maximal ideals

- 20. For $x, y \in \mathbf{R}$, let d(x, y) = |x y|. Then :
 - (A) (-1, 1) is complete in d
 - (B) (-1, 1) is not complete in d, but there is a complete metric on (-1, 1) inducing the same topology on (-1, 1) as of d
 - (C) every metric on (-1, 1) inducing the same topology as that of d is complete
 - (D) no metric on (-1, 1) inducing the same topology as that of d is complete
- 21. Let $X = \{(x, y) \in \mathbb{R}^2 : |x| |y| = 1\}$ and $Y = \{(x, y) \in \mathbb{R}^2 : |x| + |y| = 1\}$. Then :
 - (A) X and Y are compact
 - (B) X is compact, but Y is not compact
 - (C) Y is compact, but X is not compact
 - (D) neither X nor Y is compact
- 22. Let E be a measurable subset of **R** such that m(k) = 0 for all compact subsets k of E. Then :
 - (A) E is bounded
 - (B) For ε > 0 there is an open set
 U in **R** such that E ⊂ U and
 m(U) < ε
 - (C) E is a G_{δ} -set
 - (D) E is an F_{σ} -set

- 23. Let G be a group of prime power order. Then :
 - (A) G is abelian
 - (B) G is simple
 - (C) G is solvable
 - (D) G has a Sylow subgroup which is abelian
- 24. Which of the following rings is *not* noetherian ?
 - (A) $\mathbf{Q}[x_1, x_2, x_3, \dots]$
 - (B) $\mathbf{Z}[x]$
 - (C) $\mathbf{Z}[\sqrt{2}]$
 - (D) **R**[x, y]/($x^2 + y^2 + 1$)
- 25. Let K/F be a Galois extension of fields. If Gal(K/F) is isomoprhic to S₃, the number of fields L such that F ⊆ L ⊆ K is :
 (A) 6
 (B) 4
 (C) 10
 (D) 8

- 26. Let X and Y be Banach spaces and $T : X \to Y$ be a bijective continuous linear map. If $\| \cdot \|_1$ and $\| \cdot \|_2$ denote the norms on X and Y respectively, define $\| x \|_3 = \| Tx \|_2$ and $\| y \|_4 =$ $\| x \|_1$, where Tx = y, for all $x \in X$ and $y \in Y$. Then :
 - (A) $\| \cdot \|_1$ and $\| \cdot \|_3$ are equivalent, but $\| \cdot \|_2$ and $\| \cdot \|_4$ are not always equivalent
 - (B) $\| \cdot \|_2$ and $\| \cdot \|_4$ are equivalent, but $\| \cdot \|_1$ and $\| \cdot \|_3$ are not always equivalent
 - (C) $\| \cdot \|_1$ is equivalent to $\| \cdot \|_3$ and $\| \cdot \|_2$ is equivalent to $\| \cdot \|_4$
 - (D) neither $\| \cdot \|_1$ is always equivalent to $\| \cdot \|_3$, nor $\| \cdot \|_2$ is always equivalent to $\| \cdot \|_4$
- 27. Let T : $l^2 \rightarrow l^2$ be defined by T $e_n = 0$ if n is odd and T $e_n = e_{n/2}$ if n is even. Then :
 - (A) T is normal
 - (B) T is self-adjoint
 - (C) T is unitary
 - (D) $T^*T = I =$ the identity map

- 28. Let C'[0, 1] = {f : [0, 1] \rightarrow **R** : f is differentiable on [0, 1] and f' is continuous} and C[0, 1] = {f : [0, 1] : f is continuous on [0, 1] with $||f|| = \sup\{|f(t)| : t \in [0, 1]\}$. Let D : C¹[0, 1] \rightarrow C[0, 1] be defined as Df = f' and I : C[0, 1] \rightarrow C[0, 1] be defined as I(f)(x) = $\int_{0}^{x} f(t) dt$. Then :
 - (A) D and I are continuous linear maps
 - (B) D is continuous, but I is not
 - (C) I is continuous, but D is not
 - (D) both D and I are not continuous
- 29. Let X and Y be topological spaces and $f : X \to Y$ be continuous. (1) $f(\overline{A}) \subset \overline{f(A)}, (2)f(A) \subset f(A)$ and (3) $f(\partial A) \subset \partial f(A)$. For every subset A of X :
 - (A) (1), (2) and (3) are true
 - (B) (1) and (2) are true, but not (3)
 - (C) (1) and (3) are true but not (2)
 - (D) (1) is true and (2) and (3) are not

- 30. Let $X = \{(x, y) \in \mathbb{R}^2 : x^2 + y^2 < 1\}$ $\cup \{(x, y) \in \mathbb{R}^2 : (x - 2)^2 + y^2 < 1\}$ and $Y = \{(x, y) \in \mathbb{R}^2 : x^2 + y^2 < 1\}$ $U \{(x, y) \in \mathbb{R}^2 : (x - 3)^2 + y^2 < 1\}$ and $Z = \{(x, y) \in \mathbb{R}^2 : x^2 + y^2 < 1, x \neq 0\}$ be subspaces of the Euclidean space \mathbb{R}^2 . Then :
 - (A) X and Y are homeomorphic to Z
 - (B) X is homeomorphic to Y, but not to Z
 - (C) X is homeomorphic to Z, but not to Y
 - (D) none of X or Y or Z is homeomorphic to the other two
- 31. Let $\{f : \mathbf{R} \to \mathbf{R} : f \text{ is continuous such}$ that f(t) = 0 for all t in a subfield of $\mathbf{R}\} = X$. Then X contains :
 - (A) uncountable number of elements
 - (B) countably infinite number of points
 - (C) finitely many elements ≥ 2
 - (D) only one element

- 32. Consider the following statements about a lattice L :
 - (*i*) Every ideal of L is a prime ideal.
 - (ii) L is a chain.

Then which of the following is *correct* ?

- (A) (I) implies (II) but not conversely
- (B) (II) implies (I) but not conversely
- (C) (I) if and only if (II)
- (D) Neither (I) implies (II) nor (II)implies (I)
- 33. Let G be a connected graph with at least 3 vertices such that removal of any edge of G disconnects the graph. Then which of the following is *not* true ?
 - (A) G has no circuit
 - (B) There is a unique path in G between any pair of distinct vertices
 - (C) G has at least two pendant vertices
 - (D) G has at least two spanning trees

- 34. Given a group of n married women and their n husbands at least how many people be chosen from this group of 2n people to guarantee the set contains a married couple ?
 - (A) n 1
 - (B) *n*
 - (C) n + 1
 - (D) n + 2
- 35. Let u_1 and u_2 be solution of the equation :

- (B) u₂ is a constant function
 (C) u₁ ≡ u₂ ≡ a constant function
- (D) $u_1 \equiv u_2$ in D

36. Consider the function

 $f(x) = |x| -1 \le x \le 1$

Then the Fourier series for f is :

(A)
$$\frac{1}{2} - \frac{4}{\pi^2} \left(\frac{\cos \pi x}{1^2} + \frac{\cos 3\pi x}{3^2} + \dots \right)$$

(B) $\frac{1}{2} - \frac{4}{\pi^2} \left(\frac{\sin \pi x}{1^2} + \frac{\sin 3\pi x}{3^2} + \dots \right)$

(C)
$$\frac{1}{2} - \frac{4}{\pi^2} \left(\frac{\cos \pi x}{1^2} + \frac{\cos 3\pi x}{3^2} + \dots \right)$$

$$-\frac{4}{\pi^2} \left(\frac{\sin \pi x}{1^2} + \frac{\sin 3\pi x}{3^2} + \dots \right)$$

(D)
$$\frac{1}{2} + \frac{4}{\pi^2} \left(\frac{\cos \pi x}{1^2} + \frac{\cos 3\pi x}{3^2} + \dots \right)$$

4 $\left(\sin \pi x + \sin 3\pi x \right)$

$$+ \frac{1}{\pi^2} \left(\frac{1}{1^2} + \frac{1}{3^2} + \frac{1}{3^2} + \frac{1}{3^2} \right)$$

The equation $3\mu_{-} - x^2\mu_{-} + 5\mu_{-} = 0$

- transforms under the change of variables to polar coordinates is :
 - (A) a non-linear equation
 - (B) a hyperbolic equation
 - (C) an elliptic equation
 - (D) a parabolic equation

37.

- 38. The linear diophantine equation 7x 8y = 5 has :
 - (A) exactly one integer solution
 - (B) exactly two integer solutions
 - (C) infinitely many integer solutions and the difference between any two values of x in the solutions is divisible by 8.
 - (D) infinitely many integer solutions and the difference between any two values of x in the solutions is divisible by 7
- 39. Which of the following is a quadratic residue modulo 43 ?
 - (A) –1
 - (B) 40
 - (C) 2
 - (D) 3
- 40. If μ is the Mobius function and n is a positive integer, then μ(n) μ(n + 1) μ(n + 2) μ(n + 3) is equal to :
 (A) 4
 (B) 0
 (C) 1
 - (D) 6

- 41. A dynamical system consists of three particles m_1 , m_2 , m_3 in motion in space. The distance between m_1 and m_2 , m_2 and m_3 , m_1 and m_3 remain constant throughout the motion. The motion will be governed by n Euler Lagrange equations. Then :
 - (A) n = 7
 - (B) n = 6
 - (C) n = 9
 - (D) n = 3
- 42. A particle of mass m is moving in a two-dimensional space. Its kinetic energy in terms of polar co-ordinates is given by :

(A)
$$\frac{1}{2}m(r^2 + r^2\dot{\theta}^2)$$

(B) $\frac{1}{2}m(\dot{r}^2 + r\dot{\theta}^2)$
(C) $\frac{1}{2}m(\dot{r}^2 + r^2\dot{\theta}^2)$
(D) $\frac{1}{2}m(r^2 + r\dot{\theta}^2)$

[P.T.O.

- 43. Let the Hamiltonian of a system be H = p²/2 + k²q²/2. If C₁, C₂ denote arbitrary constants the general solution of q is :

 (A) q(t) = C₁ cos kt + C₂ sin kt
 (B) q(t) = kt + C₁
 (C) q(t) = C₁e^{kt} + C₂e^{-kt}
 (D) q(t) = C₁ cos k²t + C₂ sin k²t

 44. Consider a single operator equation \$\bar{L}\$ = I\$\$\$\$\$\$\$\$\$\$\$\$\$ representing the relation between angular momentum vector and angular velocity :
 - (A) The operator equation represents linear transformation
 - (B) The vectors \overline{L} and \overline{W} have the same dimensions
 - (C) The vectors \overline{L} and \overline{W} are two physically different vectors having different dimensions
 - (D) The operator I acting upon the vector \overline{W} represents orthogonal rotation

- 45. If velocity components are time independent, then :
 - (A) Only stream lines and path lines are coincident
 - (B) Only stream lines and streak lines are coincident
 - (C) Only path lines and streak lines are coincident
 - (D) Stream lines, path lines and streak lines are coincident
- 46. Velocity potential function for a steady flow exists, if :
 - (A) flow is only incompressible
 - (B) flow is inviscid, incompressible and irrotational
 - (C) flow is inviscid, incompressible and rotational
 - (D) flow is only inviscid
- 47. If $\phi = (x t) (y t)$ represents the velocity potential of an incompressible two-dimensional fluid then the stream lines at time t are the curves : (A) $(x - t)^2 - (y - t)^2 = \text{constant}$ (B) $(x - t)^2 + (y - t)^2 = \text{constant}$ (C) $x^2 - y^2 = t^2$ (D) $x^2 + y^2 = t^2$

- 48. In a uniform stream with complex potential Uz, a two-dimensional source of strength m is situated at the point (a, 0). The stagnation point is at :
 - (A) $z = m + \frac{a}{U}$ (B) z = 0(C) $z = a + \frac{U}{m}$ (D) $z = a + \frac{m}{U}$
- 49. Let the first and second fundamental forms associated with a surface patch be respectively $Edu^2 + 2F \ dudv + Gdv^2$ and $Ldu^2 + 2M \ dudv + Ndv^2$. If $S = \begin{bmatrix} E & F \\ F & G \end{bmatrix}$ and $T = \begin{bmatrix} L & M \\ M & N \end{bmatrix}$, then :
 - (A) S and T are non-singular
 - (B) S is non-singular and T may not be
 - (C) T is not-singular and S may not be
 - (D) S and T are singular

50. Let U be an open subset of \mathbb{R}^2 and S be a smooth surface in \mathbb{R}^3 . If $\sigma: U \rightarrow S$ is a regular surface patch

such that
$$\det \begin{pmatrix} \sigma_u \cdot \sigma_u & \sigma_u \cdot \sigma_v \\ \sigma_u \cdot \sigma_v & \sigma_v \cdot \sigma_v \end{pmatrix} = 1$$

Then :

- (A) σ is an isometry
- (B) σ is conformal, but not an isometry
- (C) σ preserves area, but need not be conformal
- (D) σ preserves area and conformal
- 51. Let $S = \{(x, y, f(x, y) \in \mathbb{R}^3 | (x, y) \in \mathbb{U}\}$ where U is open in \mathbb{R}^2 and $f: \mathbb{U} \to \mathbb{R}$ is smooth. If f admits a local maximum at p and a local minimum at q, then the Gaussian curvatures k_1 and k_2 to S at the points (p, f(p)) and (q, f(q)) respectively satisfy :

(A)
$$k_1, k_2 \ge 0$$

(B) $k_1 \ge 0, k_2 \le 0$
(C) $k_1 \le 0, k_2 \ge 0$
(D) $k_1, k_2 \le 0$

[P.T.O.

52. The functional $\int_{0}^{\pi/4} (y^2 - y'^2) dx$ satisfying y(0) = 0 attains its extremal on :

(A) y = x

- (B) y = 0
- (C) $y = \sin x$
- (D) $y = \cos x$

53. Let
$$J(y) = \int_{-1}^{1} (y'e^y + xy^2) dx$$
 be a functional defined on $C^1[-1, 1]$.
Then the variation of the integral $J[y]$ is :

(A)
$$\int_{-1}^{1} (y''e^y + e^yy' + 2xyy') dx$$

(B)
$$\int_{-1}^{1} (y'^2 e^y + y^2 + 2xyy') dx$$

(C)
$$\int_{-1}^{1} [[y'e^{y} + 2xy] \delta y + e^{y} \delta y'] dx$$

(D)
$$\int_{-1}^{1} [[y'e^{y} + 2xy + y^{2}] \delta y + e^{y} \delta y'] dx$$

54. Consider the functional

$$\mathbf{J}[y] = \int_{a}^{b} \mathbf{F}(x, y, y') \ dx$$

where $F(x, y, y') = \frac{1 + y^2}{{y'}^2}$

for admissible function y(x). Which of the following are extremals for J ?

- (A) $y(x) = A \sin x$ where A is constant
- (B) $y(x) = A \sinh x + B \cosh x$, A, B are constants
- (C) $y(x) = \sinh (Ax + B)$ where A, B are constants
- (D) $y(x) = A \sin x + B \cos x$, where A, B are constants
- 55. The shortest distance between the parabola $y = x^2$ and the straight line x - y = 5 is : (A) 0 (B) 5 (C) $\frac{19\sqrt{2}}{8}$ (D) $\sqrt{5}$

56. For the Fredholm integral equation

$$u(t) = \lambda \int_{a}^{b} k(t, s) u(s) \, ds$$

with separable kernel, Fredholm determinant $D(\lambda) \neq 0$. Then the integral equation has :

- (A) unique zero solution
- (B) unique non-zero solution
- (C) infinitely many solutions
- (D) no solution
- 57. Eigen value and eigen function of the homogeneous integral equation

$$u(t) = \lambda \int_{0}^{1} e^{t+s} u(s) ds$$

is :

(A)
$$\lambda = \frac{2}{e^2 - 1}, u(t) = e^{t^2}$$

(B) $\lambda = \frac{2}{e^2 - 1}, u(t) = e^t$
(C) $\lambda = \frac{e^2 - 1}{2}, u(t) = e^t$
(D) $\lambda = \frac{e^2 - 1}{2}, u(t) = e^{t^2}$

58. The solution of the Volterra integral equation of first kind

$$f(t) = \int_0^t e^{t-s} u(s) \, ds,$$

where f(t) is known function, is :

(A)
$$tf(t) - f'(t)$$

(B) $f'(t) - f(t)$
(C) $f'(t) - tf(t)$
(D) $t(f'(t) - f(t))$

59. Which of the following is not correct ?
(A) E = 1 + Λ

(A)
$$\Sigma = \Gamma + \Delta$$

(B) $\Delta = \nabla (1 - \nabla)^{-1}$
(C) $\nabla = E^{-1} \Delta$

(D)
$$1 + \Delta = (E + 1)\nabla^{-1}$$

If $u_1 = 1$, $u_2 = 17$, $u_4 = 48$

61. Let y = f(x) takes the values $y_0, y_1,$, y_n , for $a = x_0, x_1 = x_0 + h$,, $x_n = x_0 + nh = b$. Then the value of $\int_a^b f(x)dx$ by Trapezoidal rule is :

(A)
$$\frac{h}{2} [2(y_0 + y_1) + (y_2 + \dots + y_n)]$$

(B)
$$\frac{n}{2}[(y_0 + y_n) + 2(y_1 + y_2 + \dots + y_{n-1})]$$

(C)
$$\frac{h}{2} [2(y_0 + y_n) + (y_1 + y_2 + \dots + y_{n-1})]$$

(D)
$$\frac{h}{2}[(y_0 + y_1) + 2(y_2 + \dots + y_n)]$$

62. Laplace transform of $J_0(a \ t)$ where J_0 denotes the Bessel function of zero order is :

(A) $\frac{1}{s^2 + a^2}$ (B) $\frac{1}{\sqrt{s^2 + a^2}}$ (C) $\frac{1}{s^2 - a^2}$ (D) $\frac{1}{\sqrt{s^2 - a^2}}$ 63. Fourier cosine transform of $f(t) = e^{-t^2}$ is : (A) $\frac{1}{\sqrt{2}}e^{-4s^2}$ (B) $\frac{1}{\sqrt{2}}e^{-2s^2}$ (C) $\frac{1}{\sqrt{2}}e^{-\frac{s^2}{2}}$ (D) $\frac{1}{\sqrt{2}}e^{-\frac{s^2}{4}}$

64. If $L{f(t)} = F(s)$ and $L{g(t)} = G(s)$, then $L^{-1}{(F(s)G(s))}$ is :

(A)
$$\int_{0}^{t} f(x) g(t-x) dx$$

(B) $\int_{0}^{t} f(x) g(x) dx$
(C) $\int_{0}^{t} f(x) g(t+x) dx$
(D) $\int_{0}^{t} f(x-t) g(x-t) dx$

- 65. Consider the non-linear programming problem Max. Z = $10x_1 - x_2^2$ Subject to the constraints : $x_1 + x_2 \le 14$ $-x_1 + x_2 \le 6$ and $x_1, x_2 \ge 0$ Then the Lagrangian function is : (A) $(10x_1 - x_2^2) - \lambda_1(x_1 + x_2 + r_1^2 - 14)$ $-\lambda_{2}(-x_{1}+x_{2}+r_{2}^{2}-6)$ (B) $(10x_1 - x_2^2) + \lambda_1(x_1 + x_2 + r_1 - 14)$ $+\lambda_2(-x_1+x_2+r_2-6)$ $(10x_1 - x_2^2) + \lambda_1(-x_1 + x_2 - r_1 - 14)$ (C) $+\lambda_{2}(x_{1}-x_{2}-r_{2}+6)$ $(10x_1 + x_2^2) + \lambda_1(x_1 + x_2 - r_1^2 + 14)$ (D) $+\lambda_{2}(x_{1}-x_{2}-r_{2}^{2}+6)$ 66. The number of positive integers, not greater than 100 which are not divisible by 2, 3 or 5, is: (A) 20(B) 25 (C) 26 (D) 30 67. Let k, k' and δ be the vertex connectivity, edge connectivity and minimum degree respectively of graph G. Then : (A) $\delta \leq k'$ (B) $k' \leq k$ (C) k = k', whenever G is 3-regular (D) $\delta = k'$, whenever G is regular
 - 68. Consider (\mathbf{R} , μ) be Lebesgue measure space. Define

$$v(A) = \int_{A} f(x) d\mu \text{ where}$$
$$f(x) = \begin{cases} \sin x & 0 \le x \le 2\pi \\ 0 & \text{otherwise} \end{cases}$$

Then :

- (A) v is a measure
- (B) v is a signed measure
- (C) v is both measure and signed measure
- (D) v is neither a measure nor a signed measure
- **69**. Let v be a signed measure on (X, m). Let P be a positive set and N be a negative set. Then :
 - (A) $P \cap N$ is a positive set
 - (B) $P \cap N$ is a negative set
 - (C) $P \cap N$ is a null set
 - (D) $P \cap N$ is not measurable
- 70. Which of the following subsets of \mathbf{R} has non-zero Lebesgue measure ?

(A)
$$\left\{ n + \frac{1}{n} : n \in \mathbf{N} \right\}$$

- (B) The cantor set
- (C) $\{a + b\sqrt{2} : a, b \in \mathbf{Q}\}$
- (D) The set of limit points of \mathbf{Q}

in **R**

- 71. Let the middle number of the three distinct real numbers a, b and c be mid{a, b, c}. Then mid{a, b, c} =
 - (A) $\min\{\max\{a, b\}, \min\{b, c\}\}$ $\min\{a, c\}\}$
 - (B) min{max{a, b}, max{b, c} max{a, c}
 - (C) max{max{a, b}, max{b, c} min{a, c}
 - (D) max{max{a, b}, max{b, c} max{a, c}
- 72. Let (x_n) be a sequence of real numbers. Then (x_n) has a subsequence which is :
 - (A) monotone
 - (B) bounded
 - (C) cauchy
 - (D) convergent

73. Consider the following statements :

- (a) There is a continuous map from[0, 1] onto (0, 1)
- (b) There is a continuous map from(0, 1) onto [0, 1]

Then :

- (A) only (a) is true
- (B) only (b) is true
- (C) both (a) and (b) are true
- (D) both (a) and (b) are false

74. Consider the function

$$f(x) = \begin{cases} x \sin\left(\frac{1}{x}\right), & \text{if } 0 < x \le 1 \\ 0 & \text{, if } x = 0 \end{cases}$$

Then which of the following statements is *true* ?

- (A) f is Riemann integrable
- (B) f is not continuous at x = 0
- (C) f is of bounded variation
- (D) f is differentiable at x = 0
- 75. Consider \mathbf{R} with the metric defined by :

$$d(x, y) = \begin{cases} 1, & \text{if } x \neq y \\ 0, & \text{if } x = y \end{cases}$$

Which of the following statements is *true* for (\mathbf{R}, d) ?

- (A) (0, 1) is not closed
- (B) $(0, \infty)$ is unbounded
- (C) [0, 1] is not compact
- (D) {1, 2,, 100} is not open
- 76. For a complex number z, the inequality |z i| < |z + i| is :
 - (A) never true
 - (B) always true
 - (C) true if and only if Im(z) > 0
 - (D) true if and only if $\operatorname{Re}(z) > 0$

- 77. Which of the following sets is mapped onto the right half plane under the map $f(z) = \sin z$?
 - (A) $\left\{z : 0 < \operatorname{Re}(z) \leq \frac{\pi}{2}\right\}$
 - (B) $\left\{z : \frac{-\pi}{2} \leq \operatorname{Im}(z) \leq \frac{\pi}{2}\right\}$
 - (C) $\left\{z : 0 < \operatorname{Im}(z) \leq \frac{\pi}{2}\right\}$
 - (D) $\left\{z: \frac{-\pi}{2} \leq \operatorname{Re}(z) \leq \frac{\pi}{2}\right\}$

78. Consider the following statements :

- (a) Every non-negative harmonic function on C is constant.
- (b) Every harmonic function on
 C {0} has a harmonic conjugate

Then :

- (A) only (a) is true
- (B) only (b) is true
- (C) both (a) and (b) are true
- (D) both (a) and (b) are false

79. The value of the integral

$$\frac{1}{2\pi i} \int_{|z|=1} z^3 \cos\left(\frac{1}{z}\right) dz$$

is:
(A) 0
(B) 1
(C) $\frac{-1}{6}$
(D) $\frac{1}{24}$

80. Consider the function

$$f(z) = \frac{1}{z^2 \sin z}.$$

Then :

- (A) f has a pole of order 1 at z = 0
- (B) f has a pole of order 2 at z = 0
- (C) the residue of f at z = 0 is $\frac{1}{3}$
- (D) the residue of f at z = 0 is $\frac{1}{6}$

81. Let $\phi : G \to G'$ be a surjective group homomorphism. Then :

- (A) If G is cyclic, then G' is cyclic
- (B) If G' is cyclic, then G is cyclic
- (C) G is cyclic if and only if G' is cyclic
- (D) If G is not cyclic, then G' is not cyclic

- 82. Let *n* be a square free natural number. Then the quotient ring $Q[X]/\langle X^2 n \rangle$ is :
 - (A) not a field
 - (B) an integral domain which is not a field
 - (C) not an integral domain
 - (D) an integral domain

- (A) a cyclic group
- (B) \mathbf{Z}_n for some $n \ge 1$
- (C) S_n for some $n \ge 1$
- (D) (\mathbf{R} , +)
- 84. Let σ be a permutation in Sn. Let $\sigma = \sigma_1, \sigma_2, \dots, \sigma_k$, where $\sigma_1, \sigma_2, \dots, \sigma_k$ are disjoint cycles of lengths l_1, l_2, \dots, l_k respectively. Then the order of σ is equal to :
 - (A) $l_1 + l_2 + \dots + l_k$
 - (B) $l_1 \cdot l_2 \dots \cdot l_k$
 - (C) $gcd(l_1, ..., l_k)$
 - (D) $lcm(l_1, ..., l_k)$
- 85. Which of the following is a principal ideal of $\mathbf{Z}[x]$?
 - (A) (2, x)
 - (B) (3, x)
 - (C) $(x, x^2 x, x + 4)$
 - (D) $(2x, 3x, x^2)$

86. T_1 , T_2 and T_3 are three maps defined on \mathbf{R}^3 as :

$$T_{1}\begin{bmatrix}x\\y\\z\end{bmatrix} = \begin{bmatrix}x+1\\y\\z\end{bmatrix}, T_{2}\begin{bmatrix}x\\y\\z\end{bmatrix} = \begin{bmatrix}xy\\z\end{bmatrix}$$
$$T_{3}\begin{bmatrix}x\\y\\z\end{bmatrix} = \begin{bmatrix}x+y\\y+z\\z+x\end{bmatrix}.$$
Which of these maps are linear ?
(A) T_{1}, T_{2}, T_{3}
(B) T_{1}, T_{2}, T_{3}
(D) T_{1}, T_{2}, T_{3}
(D) T_{1}, T_{3}
87. Let T be a linear operator on \mathbf{R}^{4} having the minimal polynomial $(x + 1)^{3}$. Then which of the following statements is *true* ?
(A) T is diagonalizable over \mathbf{R}
(B) T is nilpotent
(C) T is triangulable over \mathbf{R}
(D) characteristic polynomial of T is $(x + 1)^{3}$
88. Let V be a finite dimensional vector space over K and W be a subspace of V. Then which of the following statements is *true* ?
(A) dim V = dim W + dim $\frac{W}{V}$
(B) dim V = dim W + dim $\frac{W}{V}$
(C) dim V = dim W + dim $\frac{V}{W}$
(D) dim V = dim W + dim $\frac{V}{W}$

89. Let T be a linear operator on \mathbb{R}^3 , given by :

$$\mathbf{T}\begin{bmatrix} x\\ y\\ z\end{bmatrix} = \begin{bmatrix} 2x + 2y + z\\ 2y + z\\ 2x + 3y + z\end{bmatrix}$$

Then the matrix representation of T with respect to standard basis of \mathbf{R}^3 is :

	$\lceil 2 \rceil$	2	1	
(A)	0	2	1	
	$\lfloor 2$	3	1	
(B)	$\lceil 2 \rceil$	3	1	
	0	2	1	
	2	2	1	
(C)	$\lceil 2 \rceil$	0	2	
	2	2	3	
	1	1	1	
(D)	1	1	1]	
	2	0	2	
	2	2	3	

- 90. Let A and B be real n × n matrices. Which of the following statements is *false* ?
 - (A) If A⁻¹ and B⁻¹ are congruent, then so are A and B
 - (B) If A^t and B^t are congruent, then so are A and B
 - (C) If both A and B are congruent to the identity matrix, then they are congruent
 - (D) If both A and B have the same rank, then they are congruent

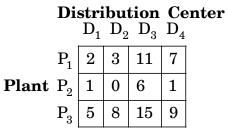

91. The partial differential equation $u_t + u_x = u^2$ can be classified as : (A) Linear (B) Non-linear (C) Semilinear (D) None of the above 92. The complete integral of the partial differential equation f(p, q) = 0is : (A) $z = \phi(a) x + y + b$ (B) $z = \phi(a) x^2 + ay + b$ (C) $z = \phi(a) x + ay + b$ (D) $z = x^2 + ay + b$ 93. Consider the following two statements : (I) The set $\{x, |x|\}$ is linearly independent on $(-\infty, \infty)$ (II) The Wronskian W(x, |x|) = 0on $(-\infty, \infty)$ Then : (A) Both (I) and (II) are true (B) Neither (I) nor (II) is true (C) Only (I) is true (D) Only (II) is true 94. Solution of the differential equation xdy - ydx = 0,represents a : (A) straight line (B) hyperbola (C) parabola (D) circle

95. The order and degree of the differential equation

$$\left[1+3\frac{dy}{dx}\right]^{\frac{2}{3}} = 4\frac{d^3y}{dx^3}$$

is :

- (A) (3, 2)(B) (3, 4)(C) (3, 3)(D) (2, 3)
- 96. A dairy firm has three plants P_1 , P_2 , P_3 located in a state. They daily milk production at each plant (in thousand liters) is $P_1 \rightarrow 6$, $P_2 \rightarrow 1$, $P_3 \rightarrow 10$. Each day, the firm must fulfil the needs of its four distribution centers D_1 , D_2 , D_3 , D_4 . The minimum requirement at each center (in thousand liters) is $D_1 \rightarrow 7$, $D_2 \rightarrow 5$, $D_3 \rightarrow 3$, $D_4 \rightarrow 2$. Cost in hundred of rupees of shipping one thousand liters from each plant to each distribution center is given below :

Then the initial basic feasible by North-West Corner method is :

- (A) Non-degenerate and cost associated with this solution is
 ₹ 11,600
- (B) degenerate and cost associated with this solution is ₹ 12,000
- (C) non-degenerate and cost associated with this solution is
 ₹ 12,000
- (D) degenerate and cost associated with this solution is ₹ 11,600

97. Consider the following LP program :

Max

$$\mathbf{Z} = -3x_1 + 2x_2$$

Subject to the constraints :

$$\begin{array}{l} x_1 \leq 3 \\ x_1 - x_2 \leq 0 \\ x_1, \, x_2 \geq 0 \end{array}$$

Then the above LP problem has :

- $(A) \ \ no \ \ feasible \ \ solution$
- (B) feasible solution
- (C) unbounded solution
- (D) none of the above
- 98. Consider the following statements :
 - (I) Dual of the dual is primal.
 - (II) Every solution of an LP problem is a basic feasible solution.

Then which of the following is *true* ?

- (A) Only (II) is true
- (B) Only (I) is true
- (C) Both are true
- (D) Neither (I) nor (II) is true

99. Consider the LP problem : Max Z = $4x_1 + 2x_2$ Subject to the constraints : $-x_1 - x_2 \leq -3$ $-x_1 + x_2 \ge -2$ and $x_1, x_2 \ge 0.$ Then the dual of the LP problem is : Min. W = $ay_1 + by_2$ $-py_1 + qy_2 \ge 4$ $-y_1 - y_2 \ge 2$ and $y_1, y_2 \ge 0$ where the values of a, b, p, q are : (A) a = -3, b = -2, p = -1, q = -1(B) a = 3, b = 2, p = -1, q = -1(C) a = -3, b = 2, p = 1, q = 1(D) a = 3, b = 2, p = -1, q = 1100. For an LP problem which of the following statements is *false*? (A) If the feasible region is a polyhedron, then at least one basic feasible solution is optimal (B) If an optimal solution exists, then the feasible region is bounded (C) If the half spaces corresponding to the constraints do not intersect, the problem has no feasible solution (D) The set of all feasible solutions to the problem is a convex set

SECTION III

101. Suppose a distribution function $F : \mathbf{R} \rightarrow [0, 1]$ of a random variable X is as follows :

$$\mathbf{F}(x) = \begin{cases} 0, & \text{if } x < -2, \\ 1/3, & \text{if } -2 \le x < 0, \\ 1/2, & \text{if } 0 \le x < 5, \\ 1/2 + (x-5)^2/2, & \text{if } 5 \le x < 6, \\ 1, & \text{if } x \ge 6. \end{cases}$$

Then E(X) is :

(A)
$$\frac{11}{6}$$

(B) $\frac{1}{6}$
(C) $\frac{125}{6}$
(D) $\frac{13}{6}$

102. Which of the following statements is *correct* ?
The set of points of continuities of a distribution function is :
(A) uncountable
(B) countable

- (C) finite
- (D) empty

- 103. Suppose X and Y are two random variables whose third order moments exist. Then $(E(|X + Y|^3))^{1/3}$ is less than or equal to :
 - (A) $(E(|X|^3))^{1/3} (E(|Y|^3))^{1/3}$
 - (B) $(E(|X|^3))^{1/3} + (E(|Y|^3))^{1/3}$
 - (C) $(E(|X|) + E(|Y|))^{1/3}$
 - (D) $(E |X| \cdot E |Y|)^{1/3}$
- 104. Suppose X is an absolutely continuous random variable with probability density function f(.) and characteristic function $\phi(.)$. Suppose $\phi(.)$ is a Riemann integrable on R. Then :

(A)
$$f(x) = \frac{1}{2\pi} \int_{R} e^{iux} \phi(u) du$$

(B)
$$f(x) = \int_{R} e^{-iux} \phi(u) du$$

(C)
$$f(x) = \frac{1}{2\pi} \int_{R} e^{-iux} \phi(u) du$$

(D)
$$f(x) = \frac{1}{2\pi} \int_{0}^{\infty} e^{-iux} \phi(u) du$$

- 105. It is given that the distribution of Y given X = x is Normal (x, x²). Suppose X ~ U(0, 1). Then, which of the following statements is not true ?
 - (A) E(Y) = 1/2
 - (B) Var(Y) = 5/12
 - (C) Cov(X, Y) = 3/12
 - (D) Corr(X, Y) = 1
- 106. Let $\phi_X(\underline{t})$ be the characteristic function of $\underline{X} \sim N_3(\underline{\mu}, \Sigma)$. Then $EX_1X_2^2X_3$ is given by :

(A)
$$\frac{(-1)^4 \partial^4 \phi_{\underline{X}} (\underline{t})}{\partial t_1 \partial t_2^2 \partial t_3} \bigg|_{\underline{t} = \underline{0}}$$

(B)
$$\frac{(-1)^3 \partial^3 \phi_{\underline{X}} (\underline{t})}{\partial t_1 \partial t_2 \partial t_3} \bigg|_{t_1 = 1, t_2 = 2, t_3 = 1}$$

(C)
$$\frac{(-1)^3 \partial^4 \phi_{\underline{X}} (\underline{t})}{\partial t_1 \partial t_2^2 \partial t_3} \bigg|_{t_1 = 1, t_2 = 2, t_3 = 1}$$

(D)
$$\frac{\partial^4 \phi_{\underline{X}}(\underline{t})}{\partial t_1 \partial t_2^2 \partial t_3} \Big|_{t_1 = 1, t_2 = 2, t_3 = 1}$$

107. Let $f(x \mid \theta) = e^{-(x-\theta)} x \ge \theta$ and let the prior for θ be given by $\pi(\theta) = e^{-\theta}$ $0 < \theta < \infty$. Then :

- (A) the posterior distribution for θdoes not exist
- (B) the posterior distribution for θis U(0, x).
- (C) the posterior distribution for θis exponential distribution
- (D) the posterior distribution for θ
 exists but its mean is not finite
- 108. Suppose X_1 ,, X_n are independent random variables with probability density function

$$f(x_i, \theta) = \begin{cases} \frac{1}{2i\theta}, & \text{if } -i\theta < x_i < i\theta \\ 0, & \text{otherwise.} \end{cases}$$

Then the minimal sufficient statistic for θ is :

- (A) { $X_{(1)}$, ..., $X_{(n)}$ } (B) max{ $|X_1|$, $|X_2|/2$, ..., $|X_n|/n$ } (C) max{ $|X_1, X_2/2, X_3/3, ..., X_n/n$ }
- (D) $\min\{|X_1, X_2/2, X_3/3, \dots, X_n/n\}$

- 109. Suppose $\{X_1, X_2, \dots, X_n\}$ is a random sample of size *n* from the N(μ , σ^2) distribution, $\mu \in \mathbf{R}$, $\sigma^2 > 0$. Suppose $\hat{\sigma}_n^2$ and T_n denote the maximum likelihood estimator and the UMVUE of σ^2 respectivley. Which of the following statements is *correct* ?
 - (A) $\hat{\sigma}_n^2$ has smaller variance than that of T_n
 - (B) $\hat{\sigma}_n^2$ has smaller MSE than that of \mathbf{T}_n
 - (C) $\hat{\sigma}_n^2$ has larger variance than that of T_n
 - (D) $\hat{\sigma}_n^2$ and \mathbf{T}_n have the same MSE
- 110. Suppose $f(x, \theta)$ is a probability density function of X for which differentiation under integral sign is permissible.

Then
$$\operatorname{E}\left(\frac{d}{d\theta}\log f(\mathbf{X},\theta)\right)$$
 is

- (A) equal to the Fisher information
- (B) less than zero
- (C) less than 1
- (D) equal to zero

- 111. Suppose $\{X_1, X_2, \dots, X_n\}$ is a random sample Poisson distribution with mean θ . Then the uniformly most powerful test for testing $H_0: \theta = 1$ against $H_1: \theta > 1:$
 - (A) rejects H_0 if $\overline{X} < c_1$ or $\overline{X} > c_2$ for some c_1, c_2
 - (B) rejects H_0 if $\overline{X} < c$ for some c
 - (C) rejects H_0 if $\overline{X} > c$ for some c
 - (D) rejects H_0 if $c_1 < \overline{X} < c_2$ for some c_1, c_2
- 112. Suppose $\{X_1, X_2, \dots, X_n\}$ is a random sample of size *n* from the U(0, θ) distribution. Then :
 - (A) Sample mean $\overline{\mathbf{X}}_n$ is consistent for $\boldsymbol{\theta}$
 - (B) Sample median is cosistent for θ
 - (C) $2\overline{\mathbf{X}}_n$ is consistent for θ
 - (D) $X_{(1)}$ is consistent for θ

113. Suppose $\{X_1, X_2, \dots, X_n\}$ are independent and identically distributed random variables each having the probability density function :

$$f(x) = \frac{\theta}{x^2}, \ x \ge \theta$$

Then : (A) $\sqrt{n} \left(X \left(\left[\frac{n}{4} \right] + 1 \right) - \frac{4\theta}{3} \right) L$ $z \sim N(0, 16 \ \theta/27)$ (B) $\sqrt{n} \left(X \left(\left[\frac{n}{4} \right] + 1 \right) - \frac{4\theta}{3} \right) L$ $z \sim N(0, \theta/3)$ (C) $\sqrt{n} \left(X \left(\left[\frac{n}{4} \right] + 1 \right) - \frac{4\theta}{3} \right) L$ $z \sim N(0, 16 \ \theta^2/27)$ (D) $\sqrt{n} \left(X \left(\left[\frac{n}{4} \right] + 1 \right) - \frac{4\theta}{3} \right) L$ $z \sim N(0, 16 \ \theta/27)$ 114. Let X_1, X_2, \dots, X_n be *iid* $f(x, \theta, \alpha)$, where : $f(x; \theta, \alpha) = \frac{e^{-x/\theta} x^{\alpha-1}}{|(\alpha) \theta^{\alpha}|}$. Then, $\sqrt{n} (\log \overline{X} - \log \alpha \theta) d z$, where d z is distributed as :

(A) N(0, 1)

(B) N(0, $1/\alpha$) (C) N(0, α^2/θ^2)

(D) N(0, θ^2/α^2)

- 115. Let X_1, X_2, \dots, X_n be *iid* U(0, θ) Define $T_1 = \bar{X}$ and $T_2 = (X_{(1)} + X_{(n)})/2$. Where $X_{(1)} = \min(X_1, \dots, X_n)$, $X_{(n)} = \max (X_1 \dots, X_n)$. Then :
 - (A) both T_1 and T_2 are equally efficient when n = 2
 - (B) ARE(T₁, T₂) > 1 when n > 2
 - (C) ARE(T₁, T₂) < 1 for all n
 - (D) ARE(T₁, T₂) \rightarrow 0 as $n \rightarrow \infty$

116. For a sample correlation coefficient*r*, it is known that :

 $\sqrt{n} (r-\rho) \underset{\rightarrow}{d} \operatorname{N}(0, (1-\rho^2)^2),$

where ρ is the population correlation coefficient. For what transformation

$$g(.),$$

$$\sqrt{n}(g(r) - g(\rho)) \stackrel{d}{\rightarrow} N(0, 1)?$$

$$(A) \quad \log \frac{1+\rho}{1-\rho}$$

$$(B) \quad \frac{1}{2} \log \frac{1-\rho}{1+\rho}$$

$$(C) \quad \frac{1}{2} \log(1+\rho)$$

$$(D) \quad \frac{1}{2} \log \frac{1+\rho}{1-\rho}$$

- 117. Let $\underline{X} \sim N_4(\underline{\mu}, \Sigma)$ where eigen values of Σ are given by $\lambda_1 = 6$, $\lambda_2 = 4$, $\lambda_3 = 3$, $\lambda_4 = 2$. Let Y_i be the principal component corresponding to λ_i , i = 1, 2, 3, 4. Then which of the following statements is *not* correct ?
 - (A) Y_i , i = 1, ..., 4 are mutually independently distributed
 - (B) Y_1 , Y_2 , Y_3 , Y_4 are identically normally distributed
 - (C) The percentage of variation explained by Y_1 and Y_2 is greater than 60%
 - (D) Y_4 explains the smallest portion of variance
- 118. Let <u>X</u> ~ N_n(<u>μ</u>, Σ) where Σ is a +ve definite matrix. Then which of the following is a necessary condition for <u>Y</u> = A<u>X</u> to have independently distributed marginal distributions ?
 (A) A is any non-singular matrix
 (B) A is an idempotent matrix
 (C) A is an orthogonal matrix
 (D) Columns of A form orthonormal eigen vectors of Σ

119. Let $\underline{X} \sim N(\underline{0}, \Sigma)$ where Σ is a +ve definite matrix, and A is an idempotent matrix of rank k < P. Let $Z = X^{1}\Sigma^{-1}AX$. Then mean and variance of z respectively equal :

- (A) *n*, 2*n*
- (B) *k*, 2*k*
- (C) k, k
- (D) *n*, *n*

120. Let $\underline{X} \sim N_3(\underline{\mu}, \Sigma)$ with

 $\Sigma = \begin{bmatrix} 1 & \rho & \rho^2 \\ \rho & 1 & 0 \\ \rho^2 & 0 & 1 \end{bmatrix}$

Then the conditional distribution of (X_1, X_2) given $X_3 = x_3$ is $N_2(\underline{\mu}^*, \Sigma^*)$ where $\underline{\mu}^*$ and Σ^* are respectively given by :

(A)
$$\begin{bmatrix} \mu_1 \\ \mu_2 \end{bmatrix}$$
, $\begin{bmatrix} 1 & \rho \\ \rho & 1 \end{bmatrix}$
(B) $\begin{bmatrix} \mu_1 + \rho^2 (x_3 - \mu_3) \\ \mu_2 \end{bmatrix}$, $\begin{bmatrix} 1 & \rho \\ \rho & 1 \end{bmatrix}$
(C) $\begin{bmatrix} \mu_1 + \rho^2 (x_3 - \mu_3) \\ \mu_2 \end{bmatrix}$, $\begin{bmatrix} 1 - \rho^4 & \rho \\ \rho & 1 \end{bmatrix}$
(D) $\begin{bmatrix} \mu_1 \\ \mu_2 \end{bmatrix}$, $\begin{bmatrix} 1 - \rho^4 & \rho \\ \rho & 1 \end{bmatrix}$

121. Let $\underline{\mathbf{X}} \sim \mathbf{N}_{n}(\underline{0}, \sigma^{2}\mathbf{I}_{n})$. Let $\mathbf{Y} = \sum_{i=1}^{n} \mathbf{X}_{i}^{2}/\sigma^{2}$ and $\mathbf{Q}_{i} = \underline{\mathbf{X}}'\mathbf{A}_{i}\underline{\mathbf{X}}$ with rank $(\mathbf{A}_{i}) = r_{i}, i = 1, 2, \dots, k$. Let $\mathbf{Y} = \sum_{i=1}^{k} \mathbf{Q}_{i}$. Then $\mathbf{Q}_{1}, \mathbf{Q}_{2}, \dots, \mathbf{Q}_{k}$ are independently distributed if and only

if:

(A)
$$r_i > 0 \forall i \text{ and } \sum_{i=1}^k r_i = n$$

(B) $r_i > 0 \forall i \text{ and } \prod_{i=1}^k r_i = n$

(C) A_1 ,, A_n are all positive

semidefinite matrices and

$$\sum_{i=1}^n r_i = n$$

(D) Each Q_1 , Q_2 ,, Q_k have χ^2 distribution and $\sum_{i=1}^n r_i \le n$

- 122. y_1 , y_2 , y_3 are three uncorrelated random variables with common variance σ^2 and $E(y_1) = \theta_1 + \theta_3$ $E(y_2) = \theta_2 + \theta_3$, $E(y_3) = \theta_1 - \theta_3$. Hence :
 - (A) Best Linear Unbiased Estimator (BLUE) of θ_2 is y_2 with variance σ^2
 - (B) BLUE of θ_2 is $y_2 \frac{(y_1 y_3)}{2}$ with variance $\frac{3}{2}\sigma^2$
 - (C) BLUE of θ_1 is $\frac{y_1 + y_3}{2}$ with variance σ^2
 - (D) BLUE of θ_1 is $\frac{y_1 + y_2}{2}$ with variance $\frac{3\sigma^2}{2}$
- 123. In a simple linear regression analysis the fitted line using least squares theory will :
 - (A) definitely pass through the point $(\overline{x} \ \overline{y})$ when the intercept is present
 - (B) definitely pass through the point $(\overline{x} \ \overline{y})$
 - (C) never pass through the point $(\overline{x} \ \overline{y})$
 - (D) definitely pass through the point $(\overline{x} \ \overline{y})$ if slope is positive

- 124. In a multiple linear regression set up $\underline{y} = X\underline{B} + \underline{E}$ under the assumption $E(\underline{E}) = 0$, $Var(\underline{E}) = \sigma^2$. In the response variables $y_1 \dots y_n$ are :
 - (A) identical and independent
 - (B) non-identical uncorrelated
 - (C) non-identical and independent
 - (D) identical and uncorrelated
- 125. Consider a multiple linear regression model $\underline{y} = X\underline{B} + \underline{E}_{n+1}$ and suppose \hat{y}_i and e_i i = 1, ..., n are the fitted values of response variable y and residuals respectively. Then :

(A)
$$\sum_{i=1}^{n} e_i = 0$$

(B) $\sum_{i=1}^{n} e_i^2 = n\sigma^2$
(C) $\sum_{i=1}^{n} e_i y_i = 0$
(D) $\sum_{i=1}^{n} e_i y_i^2 = 0$

- 126. Consider a two-way classification model $y_{ij} = \mu + \tau_i + \beta_j + \varepsilon_{ij}$ $i = 1 \dots v$, $j = 1, \dots, b$ with $E(\varepsilon_{ij}) = 0$, $Var(\varepsilon_{ij}) = \sigma^2$, ε_{ij} uncorrelated where $\tau_i \ \delta = 1 \dots v$ are fixed effects and $\beta_j \ j = 1, \dots, b$ are random effects with mean 0 and variance σ_{β}^2 . Hence the hypothesis regarding the insignificance of random effects is :
 - (A) H_0 : $\beta_1 = \beta_2 = \dots = \beta_b$
 - (B) $H_0 : \sigma_{\beta}^2 = 0$
 - (C) $H_0 : \tau_1 = \tau_2 = \dots = \tau_v$ (D) $H_0 : \sigma^2 = 0$
- 127. A systematic sample of size 2 is drawn from a finite population with N = 4 and k = 2. The samples are drawn independently of each other. The probability that the two units (2, 4) are included in sample equals :
 - (A) 0
 - (B) $\frac{1}{2}$
 - (C) 1
 - (D) $\frac{1}{4}$

128. The variance of the usual estimator in a stratified sampling design is given by :

$$\mathbf{V}^{2} = \sum_{h=1}^{L} \frac{\mathbf{W}_{h}^{2} \mathbf{S}_{h}^{2}}{n_{h}} (1 - f_{h})^{2}$$

in the standard notations. We wish to obtain an allocation that minimizes the sample size. Then,

- (A) such an optimal allocation does not exist
- (B) proportional allocation is optimal
- (C) the optimal allocation is the one for which n_h is proportional to S_h
- (D) the optimal allocation is the one for which n_h is proportional to $W_h S_h$
- 129. Let us consider the two sampling strategies, both based on a sample of size n : I. SRSWOR II post-stratification. To estimate the population total :
 - (A) If the stratum sizes are sufficiently large for each stratum and if the error effects in W_h can be ignored, poststratification is better than SRSWOR
 - (B) SRSWOR is always better than post-stratification
 - (C) If n is sufficiently large, poststratification is better than SRSWOR
 - (D) Post-stratification is always better than SRSWOR

130. The incidence matrix of a general block design is :

$$\mathbf{N} = \begin{bmatrix} 1 & 1 & 1 \\ 1 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 1 & 1 \end{bmatrix}$$

Hence the number of estimable orthogonal block contrasts is :

- (A) 2
- (B) 1
- (C) 3
- (D) 4

131. Consider a BIBD with parameter (v, b, r, k, λ) . If v = b = 11 and r = 5, then :

- (A) $k = 5, \lambda = 2$
- (B) $k = 5, \lambda = 1$
- (C) $k = 2, \lambda = 5$
- (D) $k = 11, \lambda = 1$
- 132. In a M/M/K queueing system the departure rate μn when there are n customers in the system is :
 - (A) μ
 - (B) *n*μ
 - (C) $n\mu$ if $n \le k$ and 0 if n > k
 - (D) $n\mu$ if $n \leq k$ and nk if n > k

133. In a 2⁴ factorial design with two blocks of 8 plots each the treatment combinations are allotted as below :

Block I	Block II
a	1
b	ab
ac	С
bc	abc
d	ad
abd	bd
cd	acd
abcd	bcd

Hence the confounded treatment combination is :

- (A) ABD
- (B) ACD
- (C) BCD
- (D) ABCD
- 134. Let $\{X_t\}$ be a stationary AR(1) time series given by the recursive equation $X_t = \phi X_{t-1} + Z_t$, where $Z_t \sim W N (0, \sigma^2)$. Let P_3X_4 represesents the forecast of X_4 given the observations (X_1, X_2, X_3) . If C(ϕ) is defined as :

$$C(\phi) = \frac{E(X_4 - P_3 X_4)^2}{E(X_4 - E(X_4))^2} \,,$$

then, which of the following is *not* true ?

(A) C(0) = 1(B) $0 \le C$ (ϕ) ≤ 1 (C) $C(\phi) > 0$ when $\phi > 0$ (D) $C(\phi) < 0$ when $\phi > 0$

135. Let $\{X_i, i = 1, 2, \dots, 10\}$ be a time series with mean zero, variance one and equicorrelation $\frac{1}{2}$. Let $\overline{X}_{10} = \frac{1}{10} \sum_{i=1}^{10} X_i$, then variance of \overline{X}_{10} is : (A) 0.1 (B) 0.325 (C) 0.2 (D) 0.125

136. Let $\{X_t\}$ be a stationary time series model given by :

$$\begin{split} \mathbf{X}_t &= \mathbf{\mu} + \mathbf{\phi} \mathbf{X}_{t-1} + \mathbf{Z}_t, \ \mathbf{Z}_t \sim iid \text{ normal} \\ (0, \sigma^2). \text{ Then, which of the following} \\ \text{statements is } not \text{ true if } \mathbf{P}_{\mathbf{X}_t}(\mathbf{X}_{t+k}) \\ \text{is the forecast of } \mathbf{X}_{t+k}. \text{ Given} \\ \mathbf{X}_1, \mathbf{X}_2, \dots, \mathbf{X}_t \text{ ?} \end{split}$$

- (A) The forecast mean square error of $P_{X_t}(X_{t+k})$ approaches to $\mu^2 + \sigma^2/(1 - \phi^2)$
- (B) The forecast mean square error of $P_{X_t}(X_{t+k})$ approaches to $\sigma^2/(1 - \phi^2)$
- (C) $P_{X_t}(X_{t+k}) \rightarrow E(X_t)$ as $k \rightarrow \infty$
- (D) The forecast $P_{X_t}(X_{t+k})$ is a weighted average of $E(X_t)$ and the latest observation X_t

137. Let $\{X_n\}_0^{\infty}$ be a Markov chain with $P[X_0 = 0] = P[X_0 = 1] = \frac{1}{4}$ and $P[X_0 = 2] = \frac{1}{2}$. The t.p.m. is given by :

$$p = 1 \begin{pmatrix} 0 & 1 & 2 \\ \frac{1}{2} & \frac{1}{3} & \frac{1}{6} \\ 0 & \frac{1}{3} & \frac{2}{3} \\ \frac{1}{2} & 0 & \frac{1}{2} \end{pmatrix}$$

Then $P[X_1 = 1]$ is given by :

(A)
$$\frac{1}{3}$$
 (B) $\frac{1}{4}$
(C) $\frac{1}{5}$ (D) $\frac{1}{6}$

138. Let $\{X(t), t \ge 0\}$ be a time homogeneous Poisson process with rate λ . Let X(T) = n > 0 and let $T_1 < \dots < T_n < T$ be times at which these *n* events occur. Then, $E(T_1 | X(T) = n)$ is given by :

(A)
$$\frac{T}{n+1}$$
 (B) $T.\lambda^{n}$
(C) $\frac{n}{n+1} - T$ (D) $\frac{1}{2T}$

139. Consider a Branching process with

 μ as the mean of the off-spring distribution. Let $\mu = \frac{1}{2}$ and $X_0 = 1$. Then $E\left(\sum_{0}^{\infty} X_n\right)$ equals : (A) 1 (B) $1\frac{1}{2}$ (C) 2 (D) ∞

140. Consider a Markov chain on

S = {0, 1, 2,} with
$$p_{01} = 1$$
,
 $p_{i0} = \frac{3}{4}$, $p_{i(t)} = \frac{1}{4} \forall i = 1, 2$

then :

- (A) all the states are persistent nonnull
- (B) all the states are persistent
- (C) all the states are transient
- (D) all the states do not communicate with each other

- 141. The denominator in infant mortality rate is :
 - (A) total number of live births in a given period
 - (B) total number of live births and still births in a given period
 - (C) total number of pregnancies in a given period
 - (D) total population in a given period
- 142. In terms of life table functions, the chance that a child just born to a mother of age 31 and a father of age 33 will be alive till 40 years but will be orphaned by both parents is :

(A)
$$\left(\frac{l_{40}}{l_0}\right) \left(\frac{l_{71} - l_{31}}{l_0}\right) \left(\frac{l_{73} - l_{33}}{l_0}\right)$$

(B) $p_{40}q_{31} \cdot q_{33}$
(C) $\left(\frac{L_{40}}{l_0}\right) \left(\frac{L_{71} - L_{31}}{l_0}\right) \left(\frac{L_{73} - L_{33}}{l_0}\right)$
(D) $\left(\frac{l_{40}}{l_0}\right) \left(\frac{l_{71} - l_{31}}{l_{31}}\right) \left(\frac{l_{73} - l_{33}}{l_{33}}\right)$

- 143. For a production process, the sample ranges are found to be 1.2, 1.5, 1.1, 1.4 and 1.5. Suppose that the subgroup size is 5. Then, what will be the process standard deviation, given that $A_2 = 0.577$ and $d_2 = 2.326$?
 - (A) 0.511
 - (B) 2.463
 - (C) 2.322
 - (D) 0.576

144. The respective failure rate functions of two components are $r_1(t) = \sqrt{t}$ and $r_2(t) = 1\sqrt{t}$. Then the life time distribution of a series system with

the above components is :

- (A) IFR
- (B) DFR
- (C) Neither IFR nor DFR
- (D) Both IFR and DFR

145. In the inventory model S = Q – u.t

with Q = 1000, u = 40 and t = 10,

the current stock level is :

- (A) 400
- (B) 1200
- (C) 1000
- (D) 600
- 146. Which of the following is an example of the control of the queue discipline ?
 - (A) Customer is allowed to leave the facility
 - (B) The number of servers are varied depending on the queue length
 - (C) Separate server is allocated for special category customers
 - (D) The mean arrival rate is adjusted

147. Let D_n be the waiting time of the *n*th customer in G|M|1 queue. Consider the following recurrence equation :

$$\mathbf{D}_{n+1} = \begin{cases} \mathbf{D}_n + \mathbf{V}_n - \mathbf{U}_n \text{ if } \mathbf{D}_n + \mathbf{V}_n - \mathbf{U}_n \geq \mathbf{0} \\ \\ \mathbf{0} & \text{otherwise} \end{cases}$$

Which of the following interpretations of the variables in the above equation are valid ?

- (i) U_n is the interarrival time between *n*th and (n + 1)th customer
- (*ii*) $D_n + V_n$ is the departure time of the *n*th customer from the system
- (A) Both are not valid
- (B) Both are valid
- (C) Only (i) is valid
- (D) Only (ii) is valid

- 148. Suppose that R is the shortest route from city 1 to city 10 passing through some other cities. The principle of optimality implies that :
 - (i) For every city j on R, the subpath in R from city j to city 10 must be the shortest.
 - (*ii*) For every city *j* on R, there must be a unique path from city *j* to city 10.

Which of the above statements is *correct* ?

- (A) (i) only
- (B) (ii) only
- (C) Both (i) and (ii)
- (D) Neither (i) nor (ii)
- 149. By the principle of optimality, the minimum value of $y_1^2 + y_2^2$ s.t. $y_1y_2 = c, y_1 \ge 0, y_2 \ge 0$ is : (A) $2c^2$ (B) 2c(C) $\left(\frac{c}{2}\right)^2$ (D) $c^2/2$

- 150. Which of the following is *not* true regarding the Karmarkar's algorithm ?
 - (A) The algorithm starts with an interior point of the feasible region
 - (B) One of the basic conditions

is that
$$x = \left(\frac{1}{n}, \frac{1}{n}, \dots, \frac{1}{n}\right)$$

satisfies the equation $Ax = 0$.

- (C) Constraints are assumed to be non-homogeneous
- (D) The algorithm reduces the number of iterations
- 151. What is the failure rate function of the series system of two independent components when the failure rate functions of the two components are respectively $r_1(t)$ and $r_2(t)$?
 - (A) $\min(r_1(t), r_2(t))$
 - (B) $r_1(t) + r_2(t)$
 - (C) $r_1(t) \times r_2(t)$
 - (D) $\max(r_1(t), r_2(t))$

- 152. For a data-set of *n* observations the sample mean, median and mode are63, 60 and 58 respectively. Hence the data are :
 - (A) Symmetric about sample median
 - (B) Skewed to the left
 - (C) Skewed to the right
 - (D) Bimodal
- 153. The regression equation of Y on X is given by y = 2 - 1.2x and that of X on Y is given by x = -1 - 0.3y. Hence the correlation coefficient between X and Y is :
 - (A) + 0.36
 - (B) + 0.6
 - (C) = 0.6
 - (D) 0.36
- 154. The height of adult men in a population follows normal distribution with mean 1.65 meters and standard deviation σ . If 40% of the men are shorter than 1.5 meters, the percentage of population which is taller than 1.80 meters is :
 - (A) 80%
 - (B) 60%
 - (C) 40%
 - (D) Cannot be determined based on the given information

155. Suppose E[X] = 5. Which of the following is always false ?

- (A) $E[X^2] < (E[X])^2$
- (B) If $E[X^2] = 25$, then X = 5wp 1
- (C) $E[X^2] \ge 25$
- (D) E[exp|X|] > exp(E[|X|])
- 156. Let E and F be two disjoint events such that 0 < P(E) < 1 and 0 < P(F) < 1. Which of the following is always *true*?
 - (A) P(E | F) = P(E)
 - (B) P(E | F) = P(F)
 - (C) $P(E | F) \neq P(E)$
 - (D) $P(E^C | F) = 1$
- 157. Suppose X and Y are independent r.v.s. each with mean 1.

Let $\phi_{X}(t)$ denote the characteristic function of a random variable. Which of the following is *false* ?

- (A) $\phi_{X+Y}(t) = \phi_X(t) \cdot \phi_Y(t) \quad \forall t$
- (B) E[XY | X] = 1
- (C) $\phi_{X^2+Y^2}(t) = \phi_{X^2}(t) \cdot \phi_{Y^2}(t) \forall t$
- (D) $(1 X^2)$ and exp(Y) are independent

158. Let the joint distribution of (X, Y) be specified by :

		Х			
		1	2	3	4
v	1	$\frac{1}{16}$	$\frac{3}{32}$	$\frac{1}{8}$	$\frac{5}{32}$
I	2	$\frac{3}{32}$	$\frac{1}{8}$	$\frac{5}{32}$	$\frac{3}{16}$

Then P[X = 2Y] is :

(A) 0
(B)
$$\frac{9}{32}$$

(C) $\frac{11}{32}$
(D) $\frac{1}{2}$

159. Which of the following matrices is

a covariance matrix ?

(A)
$$\begin{bmatrix} 1 & \frac{1}{2} \\ \frac{1}{2} & 0 \end{bmatrix}$$

(B)
$$\begin{bmatrix} 1 & 2 \\ 3 & 1 \end{bmatrix}$$

(C)
$$\begin{bmatrix} 2 & -2 \\ -2 & 3 \end{bmatrix}$$

(D)
$$\begin{bmatrix} 2 & -3 \\ -3 & 2 \end{bmatrix}$$

160. If a random variable X has Cauchy distribution with location μ and scale σ , then the distribution of

$$Y = \frac{1}{X}$$
 is :

- (A) Cauchy with location μ and scale $\frac{1}{\sigma}$
- (B) Cauchy with location $\frac{\mu}{\mu^2 + \sigma^2}$ and scale $\frac{\sigma}{\mu^2 + \sigma^2}$
- (C) Cauchy with location μ and scale σ
- (D) not Cauchy
- 161. In a certain communication system, on the average, there is 1 transmission error per 10 seconds. Suppose the distribution of errors is Poisson. The probability of at least one error in a communication of half a minute duration is :
 - (A) $1 2 \exp(-1)$
 - (B) $1 \exp(-3)$
 - (C) $1 4 \exp(-3)$
 - (D) 1 exp (-1)

- 162. Suppose X is an absolutely continuous non-negative real-valued random variable whose distribution function is F(x) and probability density function is f(x). Suppose it is given that f(x)/[1 F(x)] = k, a non-negative constant. Then which of the following statements is *true* ?
 - (A) $f(x) = 1, 0 < x < \infty$
 - (B) $f(x) = k e^{-kx}, x > 0$
 - (C) $f(x) = k e^{-kx} + C, x > 0, C a$ constant

(D)
$$f(x) = \begin{cases} 0 & x < k, \\ 1 & x \ge k. \end{cases}$$

- 163. Suppose Y_1 , Y_2 and Y_3 are independent and identically distributed *p*-variate random vectors having normal distribution. Then the distribution of $a_1Y_1 + a_2Y_2 + a_3Y_3$, where a_1, a_2, a_3 are vectors of order $1 \times p$, is :
 - (A) univariate normal
 - (B) four variate normal
 - (C) trivariate normal
 - (D) not normal

- 164. Let X_1 , X_2 ,, X_n be a random sample from $U(\theta, \theta + 1)$. If $X_{(1)} < X_{(2)}$ < < $X_{(n)}$ are corresponding order statistics, then :
 - (A) $(X_{(1)}, X_{(n)})$ is jointly sufficient for θ
 - (B) $X_{(1)}$ is sufficient for θ
 - (C) $X_{(n)}$ is sufficient for θ
 - (D) $(X_{(1)}, X_{(n)}, + 1)$ is not jointly sufficient for θ
- 165. Let $Y_{(1)}$ and $Y_{(2)}$ be order statistics based on a sample of size 2 from a $U(\theta, 2\theta)$ distribution. Then $[Y_{(1)}, Y_{(2)}]$ is a confidence interval for θ with confidence coefficient :
 - (A) $\frac{1}{2}$ (B) $\frac{3}{4}$
 - (C) $\frac{1}{4}$
 - (D) 1

- 166. Let X_1, X_2, \dots, X_n be a random sample from N(μ , σ^2), μ is unknown and $a^2 > 0$. Let $q_{n,\alpha}$ be the $(1 - \alpha)$ th quantile of $\chi^2_{(n)}$ distribution. Consider the tests for testing $H_0: \sigma^2 \le 1 \ Vs. \ H_1: \sigma^2 > 1: T_1:$ Reject H₀ if and only if $\sum_{i=1}^{n} (\mathbf{X}_{i} - \overline{\mathbf{X}})^{2} > q_{n-1,\alpha} \text{ and } \mathbf{T}_{2} :$ Reject H_0 if and only if $\sum_{i=1}^{n} (\mathbf{X}_{i} - \overline{\mathbf{X}})^{2} > q_{n,\alpha} \text{ then which of}$ the following statements is *correct*? (A) T_1 is a uniformly most powerful (UMP) level α test (B) T_2 is a UMP level α test (C) Both T_1 and T_2 are level α tests (D) T_1 is level α test but T_2 is not 167. Let $\tau(\theta)$ be a parametric function and T be an estimator of $\tau(\theta)$. Let $V_{\theta}(T)$ denotes variance of T. The Cramer-Rao bound gives a : (A) Lower bound for $V_{\theta}(T)$ for any arbitrary estimator T of $\tau(\theta)$ (B) Upper bound for $V_{\theta}(T)$ for any arbitrary estimator T of $\tau(\theta)$ (C) Lower bound for $V_{\rho}(T)$ among all unbiased estimators T of $\tau(\theta)$
 - (D) Upper bound for $V_{\theta}(T)$ among all unbiased estimators T of $\tau(\theta)$

168. Let {X₁,, X_n} be a random sample from N(μ_1 , σ^2) and {Y₁,, Y_m} be a random sample from N(μ_2 , σ^2). Let

$$\begin{split} \mathbf{T}_{1} &= \sum_{i=1}^{n} \mathbf{X}_{i}^{2} + \sum_{j=1}^{m} \mathbf{Y}_{i}^{2}, \ \mathbf{T}_{2} = \sum_{i=1}^{n} \mathbf{X}_{i}, \\ \mathbf{T}_{3} &= \sum_{i=1}^{m} \mathbf{Y}_{i}, \ \mathbf{T}_{4} = \sum_{i=1}^{n} \mathbf{X}_{i}^{2}, \ \mathbf{T}_{5} = \sum_{i=1}^{m} \mathbf{Y}_{i}^{2}. \end{split}$$

Then which of the following is a jointly sufficient complete statistic for (μ_1, μ_2, σ^2) :

- (A) (T_2, T_3, T_4, T_5)
- (B) (T_3, T_4, T_5)
- (C) (T_2, T_3, T_1)
- (D) (T_2, T_3, T_5)
- 169. Suppose {X₁, X₂,, X_m} is a random sample from the distribution of X with mean μ_1 and variance σ_1^2 , {y₁,, y_n} is a random sample from the distribution of Y with mean μ_2 and variance σ_2^2 . The test statistic to test $H_0 : \sigma_1^2 = \sigma_2^2$ against $H_1 : \sigma_1^2 = \sigma_2^2$ is $T_n = \frac{S_X^2}{S_Y^2}$, where S_X^2 and S_Y^2 are sample variances. Then the null distribution of T_n is : (A) F if X and Y are independent
 - (ii) and have normal distributions(B) F if X and Y have normal
 - distributions
 - (C) F if X and Y are independent
 - (D) F if X and Y have normal distributions with equal mean

- 170. In the method of constructing confidence interval for an unknown parameter based on pivotal quantity Q, which of the following statements is *correct* ?
 - (A) The distribution of Q is known and depends on the unknown parameters
 - (B) The distribution of Q is known and free from the unknown parameters
 - (C) The distribution of Q is not known but is free from the unknown parameters
 - (D) The distribution of Q is known and normal
- 171. To test $H_0 : p = p_0$ against the alternative $H_1 : p \neq p_0$, where p is the population proportion and p_0 is a specified value of p. Suppose P_n denotes the sample proportion based on a random sample of size n from the population. The test statistic for testing $H_0 : p = p_0$ against $H_1 : p \neq p_0$ is given by :

(A)
$$\frac{\sqrt{n}(P_n - p_0)}{\sqrt{p_0(1 - p_0)}}$$

(B)
$$\sqrt{n}(\mathbf{P}_n - \mathbf{p}_0)$$

(C)
$$\frac{P_n - p_0}{\sqrt{p_0(1 - p_0)}}$$

(D)
$$\frac{P_n - p_0}{p_0(1 - p_0)}$$

- 172. To test the equality of r independent multinomial distributions, multinomial (k, p_{i_1}, p_{i_k}) $i = 1 \dots r$ the null hypothesis is $H_0 : P_{ij} = P_j$ $\forall j = 1 \dots k$ where p_j are unknown $j = 1 \dots k$, a χ^2 test statistic is used. The degrees of freedom of the χ^2 test are :
 - (A) k(r 1)
 - (B) r(k 1)
 - (C) rk 1
 - (D) (r 1) (k 1)
- 173. X and Y are two continuous random variables independent of each other. The combined sample based on two independent samples of size 5 and 4 on X and Y respectively has the following pattern :
 - $\begin{array}{l} y_4 < x_1 < x_5 < y_3 < x_2 < y_1 < y_2 < \\ x_4 < x_3 \end{array}$

Hence the value of Mann-Whitney-Wilcoxon test statistic is :

- (A) 6
- (B) 8
- (C) 10
- (D) 12

174. There are four jobs J_1 , J_2 , J_3 , J_4 that need to be processed on two machines M_1 and M_2 in sequence. The processing times are given in the following table :

$$\begin{array}{cccccccc} & J_1 & J_2 & J_3 & J_4 \\ M_1 & 6 & 10 & 4 & 7 \\ M_2 & 4 & 8 & 9 & 2 \end{array}$$

The total processing time to complete all the jobs on both the machines is :

- (A) 30
- (B) 32
- (C) 33
- (D) 35
- 175. Re-order level for an item is always :
 - (A) Less than minimum stock
 - (B) More than minimum stock
 - (C) Same as the minimum stock
 - (D) More than the average stock
- 176. Consider the following two M/M/1 queueing systems where : In Q_1 : arrival rate λ , service rate μ

In Q_2 : arrival rate 2λ , service rate 2μ Let W_1 and W_2 be the average waiting times of an arriving customer in Q_1 and Q_2 respectively. Then :

(A)
$$\overline{W}_1 < \overline{W}_2$$

$$(C) W_1 > W$$

(D) The relation between W_1 and W_2 cannot be decided

- 177. Consider a population of N = nkunits with k > 1. A sample of size n is obtained by the following method :
 - (i) A unit is drawn from the set of units labelled {k, 2k,, N} with probability 1/n and is included in the sample.
 - (*ii*) A SRSWOR of size n 1 is then obtained from the remaining N - 1 units in the population and these units are included in the sample.

Then,

- (A) The sampling method corresponds to a systematic sample
- (B) There is no unbiased estimator of the population total
- (C) Inclusion probability is not the same for all the population units
- (D) The sample mean is an unbiased estimator of the population mean

- 178. Let V_{SY}^2 be the variance of the usual estimator in a systematic sampling design and V_{SRS}^2 the variance of the sample mean in a SRSWOR design. It is known that the population has a linear trend, i.e., y_i is approximately equal to *ic*, for a positive *c*, *i* = 1, 2,, N. Then :
 - $(A) \quad V_{SY}^2 = V_{SRS}^2$
 - $(B) \quad V_{SY}^2 < V_{SRS}^2$

$$(C) \quad V_{SY}^2 > V_{SRS}^2$$

- (D) It is not possible to compare the two estimators based on the given information
- 179. Under one way fixed effects ANOVA which of the following parametric functions are estimable, where the model is :

$$y_{ij} = \mu + \alpha_i + \epsilon_{ij} \quad \begin{array}{l} i = 1 \dots p \\ j = 1 \dots n_i, \end{array}$$

 \in_{ij} are independent identically distributed with zero mean and finite variance.

(A)
$$\mu + \alpha_1 - \alpha_2$$

(B) $\alpha_1 + \alpha_3$
(C) $2\alpha_1 - \alpha_2$
(D) $\alpha_1 + \alpha_p - 2\alpha_3$

- 180. Under a randomized block design with V treatments and r replication which of the following is most correct ?
 - (A) All pairwise contrasts $\alpha_i \alpha_j$ among the unknown treatment effects α . i = 1 V are estimable and are estimated with common variance
 - (B) All contrasts of the type $\sum_{i=1}^{V} C_{i} \alpha_{i}, \sum_{i=1}^{V} C_{i} = 0, \sum_{i=1}^{V} C_{i}^{2} = 1 \text{ are}$ estimable and are estimated with common variance
 - (C) The best linear unbiased estimators $\hat{\alpha}_i - \hat{\alpha}_j \ 1 \le i \ne j \le V$ are all uncorrelated with each other
 - (D) All the above (A), (B), (C) are correct

- 181. Under an unconfounded 2³ factorial experiment with factors, A, B, C in two replicates arranged in a randomized block design which of the following statements is not correct ?
 - (A) All factorial effects are estimated with same precision
 - (B) Best linear unbiased estimators
 of the 7 factorial effects are
 mutually uncorrelated with
 each other
 - (C) The error sum of squares has an additional degree of freedom than that of the treatment sum of squares
 - (D) Total number of degrees of freedom equal twice those carried by the treatment sum of squares

- 182. Let **B** be the σ -field of subsets of R generated by $\{(a, b) | a, b \in R\}$. Which of the following is *not true*?
 - (A) Every countable subset of $R \ \in \ \boldsymbol{B}$
 - (B) All closed intervals $\in \mathbf{B}$
 - (C) All uncountable subsets of $R \ \in \ {\boldsymbol{B}}$

(D) Intervals of the form $[a, b) \in \mathbf{B}$

- 183. Consider the following set function
 - μ on a $\sigma\text{-field}~\mathfrak{I}$
 - $\mu(A) = 0$ if A is empty
 - = 1 if A is non-empty and finite
 - $= \infty$ if A is infinite

Then :

- (A) μ is not monotone
- (B) μ is not σ -additive
- (C) μ is finite
- (D) μ is a measure in \mathfrak{I}

- 184. Let R be the set of real numbers, **B** the Borel σ -field. Let '*m*' denotes the Lebesgue measure and μ the measure defined by the function $F(x) = (1 - e^{-x})$ if x > 0and F(x) = 0elsewhere. Consider the statements : (I) $\mu \ll m$, (i.e. μ is absolutely continuous w.r.t. m) (II) $m < < \mu$ (III) $\frac{d\mu}{dm}(x) = e^{-x} x > 0, \ \frac{d\mu}{dm}(x) = 0,$ $x \leq 0$ Which of the above statements are true ? (A) (I) and (II) only (B) (I) and (III) only
 - (C) (II) and (III) only
 - (D) All the three

- 185. Let $\{X_n, n \ge 1\}$ be a sequence of independent identically distributed random variables with mean 0 and finite variance $\sigma^2 > 0$: Let $S_n = \frac{X_1 + X_2 + \dots + X_{n^2}}{n^2}$ Then, which of the following is false ? (A) $P\left[\lim_{n \to \infty} S_n e^{S_n} = 0\right] = 1$
 - (B) As n → ∞, S_ne^{S_n} converges to a normal random variable with mean '0' and variance σ²
 (C) As n → ∞, S_n converges to '0'
 - (D) As $n \to \infty$, e^{S_n} converges to 1 with probability 1

in probability

- 186. Let $\{X_n, n \ge 1\}$ be a sequence of i.i.d. random variables with mean 3 and variance 11. Which of the following is *not* always correct ? As $n \to \infty$.
 - (A) $\frac{1}{n} \sum_{k=1}^{n} X_{k}^{2}$ converges in probability to 2
 - (B) $\left(\frac{1}{n}\sum_{k=1}^{n}X_{k}\right)^{2}$ converges in probability to 9
 - (C) $\frac{1}{n} \sum_{k=1}^{n} (X_k 3)^2$ converges in probability to '0'
 - (D) $\sum_{k=1}^{n} \left(\frac{X_k}{n}\right)^2$ converges in probability to '0'
- 187. Let $\{X_n, n \ge 1\}$ be a sequence of random variables such that $P\left[\lim_{n\to\infty} X_n = X\right] = 1$ for some r.v. X. Then which of the following is not always correct ?
 - (A) $\lim_{n \to \infty} \mathbf{E} \left[\cos(\mathbf{X}_n) \right] = \mathbf{E} \left[\cos(\mathbf{X}) \right]$ (B) $\lim_{n \to \infty} \mathbf{E} \left[\exp(it \mathbf{X}_n) \right] =$

(C)
$$P\left[\lim_{n \to \infty} \exp(X_n) = \exp(X)\right] = 1$$

(D)
$$\lim_{n \to \infty} \mathbb{E}[\exp(\mathbf{X}_n)] = \mathbb{E}[\exp(\mathbf{X})]$$

45

[P.T.O.

188. Let $\{X_n\}$ be a sequence of independent and uniformly bounded random variables, and $E[X_n] = 0$, and $Var(X_n) = \frac{1}{(2n)}$ for each n. Let $S_n = X_1 + \dots + X_n$ and $\sigma_n^2 = Var(S_n)$

Then which of the following is *not* true ?

(A)
$$\frac{S_n}{\sigma_n}$$
 does not converge in

distribution

(B)
$$\frac{\mathbf{S}_n}{\sigma_n}$$
 converges in distribution to

a normal random variable

(C)
$$\lim_{n \to \infty} \sum_{k=1}^{n} \frac{1}{\sigma_n^3} \mathbf{E}[|\mathbf{X}_k|^3] = 0$$

(D)
$$\lim_{n \to \infty} \frac{\mathbf{S}_n}{\sigma_n^2} = 0$$
 in probability

189. Let $\{X_n\}$ be a sequence of independent random variables such that $E[X_n] = 0$ and $Var(X_n) = \frac{1}{n^2}$, $n = 1, 2, \dots$ Let $E = \left\{ \omega \mid \sum_n X_n(w) \right\}$ converges.

Then which of the following is always *correct* ?

(A)
$$0 < P(E) < 1$$

(B) $P(E) = \frac{1}{2}$ (C) P(E) = 0(D) P(E) = 1

190. Let Y_1, Y_2 be a sequence of independent random variables with mean zero and let $\mathbf{F}_n = \sigma(Y_1, ..., Y_n)$. Define $X_n = \sum_{k=1}^n Y_k$; $W_1 = Y_1$ and $W_{n+1} = W_n + Y_{n+1}W_n^2$ and $T_n = \sum_{k=1}^n (Y_k + 1)$. Then : (A) Both $\{X_n\}$ and $\{W_n\}$ are \mathbf{F}_n -martingales (B) Only $\{X_n\}$ is a \mathbf{F}_n -martingale (C) Both $\{X_n\}$ and $\{T_n\}$ are \mathbf{F}_n -martingales

(D) All the three sequences are \mathbf{F}_n -martingales
